New nucleic acid encoding ret receptor ligands and related proteins - vectors, transformed cells and antibodies, used for promoting cell growth and improving survival of injured cells, especially renal or nerve cells

Disclosure; Page 71-73; ll3pp; English.

This sequence comprises EST AA050008, identified as a partial cDNA for mouse Ret ligand (RetL) RetL3 (see W37455), by sceening of an EST database with rat RetL1 (see W37457). A full-length mouse retL3 cDNA clone (see V00249) was obtained by combining
                                                                                                                                                                                                                                                                                                                                                                                                                  Mus

claim 1; Page 75-77; 113pp; English.

This sequence comprises cDNA coding for mouse Ret ligand (RetL)

RetL3 (see W37461), a key component of the Ret signalling pathway.

It was deduced from a partLal clone (see V00256) obtained from

from an EST database search with rat RetL1 (see W37457) and from

a clone obtained by 5' RACE. Rat and human retL1, and human retL2

and retL3 DNA sequences are also claimed (see V00245-48 and

v00250-51). Vectors containing retL3 DNA and prokaryotic or

eukaryotic host cells transformed or transfected with these vectors

are claimed, as well as a method for production of RetL3, its

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    soluble variants and fusion proteins with a toxin, imageable compound or radionuclide. RetL3, optionally when expressed from vectors in vivo, is used to promote growth of new tissue and survival of damaged tissue, particularly kidney or neural tissue. Typical applications are in renal failure, nephritis, kidney transplants, toxic or hypoxic injury, neurodegeneration, motor neurone disease, multiple sclerosis, bacterial, viral or prion infections (e.g. meningitis, myelopathy associated with HIV or Creutzfeldt-Jakob disease), cranial nerve or spinal cord injury, or conditions involving the peripheral nervous system (Lyme disease, muscular dystrophy and myasthenia gravis). Fusion proteins are used to deliver toxins etc. to Ret-expressing cells, especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              tumours.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC This sequence comprises cDNA encoding human Ret ligand (RetL) RetL3 CC (See W37463), a key component of the Ret signalling pathway. It is a composite of partial clone GJ148 (See V00250), obtained from an CC adult heart cDNA library, and of clone GJ135, isolated from an CC adult spinal cord cDNA library. Rat and human RetL1, human RetL2 and mouse RetL3 sequences are also claimed (see W37457-62). Vectors CC containing retL3 DNA and prokaryotic or eukaryotic host cells CC transformed or transfected with these vectors are claimed, as well cas a method for production of RetL3, its soluble variants and CC fusion proteins with a toxin, imageable compound or radionuclide. CC RetL3, optionally when expressed from vectors in vivo, is used to promote growth of new tissue and survival of damaged tissue, particularly kidney or neural tissue. Typical applications are in CC renal failure, nephritis, kidney transplants, toxic or hypoxic cinjury, neurodegeneration, motor neurone disease, multiple cranial nerve or spinal cord injury, developmental disorders such cordinal nerve or spinal cord injury, developmental disorders such cordinal nerve or spinal cord injury, developmental disorders such cordinal returns and cerebral palsy, or conditions involving the paripheral nervous system (Lyme disease, muscular dystrophy and cordinal cord injury, specially tumours.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC This sequence comprises a partial cDNA clone, designated GJ128, CC for human Ret ligand (RetL) RetL3 (see W37462), a key component of the Ret signalling pathway. It was isolated from a human adult CC cheart cDNA library using a probe derived from a mouse retL3 partial CC cDNA (see V00256). A full-length sequence (see V00251) for human cretL3 cDNA has also been obtained, as well as rat and human retL1, containing retL3 DNA and prokaryotic or eukaryotic host cells transformed or transfected with these vectors are claimed, as well as a method for production of RetL3, its soluble variants and creation proteins with a toxin, imageable compound or radionuclide. CC RetL3, optionally when expressed from vectors in vivo, is used to promote growth of new tissue and survival of damaged tissue, particularly kidney or neural tissue. Typical applications are in CC renal failure, nephritis, kidney transplants, toxic or hypoxic conjury, neurodegeneration, motor neurone disease, multiple sclerosis, bacterial, viral or prion infections (e.g. meningitis, cranial) nerve or sphanl cord injury, developmental disorders such as Down's syndrome and cerebral palsy, or conditions involving the peripheral nervous system (Lyme disease, muscular dystrophy and ccc to Ret-expressing cells, especially tumours.

Oligonuclectide probe MK14-A consists of nucleotides 5-95 of (051735). It hybridized to all spp. of mycobacteria tested. cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also 051735-45 and 051747-59.

                                                                                                                                                                                                                                                                                                                                        Disclosure; p; English.

Random point mutations were introduced into the alpha fragment of E.coli beta-galactosidase. The wild type sequence was obtained as a single stranded template and an oligonucleotide was hybridised to it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which covers a transcriptase. But the sequence covers all 176 difft base substitutions, most of which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Introducing random point mutations into nucleic acods - by prepn of single stranded template, annealing a primer, misincorporation, completion of molecules and screening.

Oligonucleotide probe MK14-A consists of nucleotides 5-95 of (051735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC 070468 is a generic DNA sequence used to generate random TSAR (Totally CC Synthetic Affinity Reagents) peptides. This generic formula can also be crepresented as follows: X(NNB)11(TGC)(NNB)7(TGC)(NNB)10Y. X CC and y are flanking restriction sites (X is not the same as y) that are not specified further. Other generic sequences are shown in 070466-88. CC chemically experides generated by these generic sequences are shown in CC affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. The oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSAPS or compsns. comprising a TSAR binding domain can be used in vivo to compsns. comprising a TSAR binding domain can be used in vivo to compsns. peptide, toxin or enzyme, to the specific target we callous tops, peptide, toxin or enzyme, to the specific target we callous or peptide. They can also replace the function of macromolecules, vis. CC production. The TSARs are easily characterised and have designed considered and replace and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S

Statistics: Mean 34.465; Variance 144.588; scale 0.238

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

cells transformed or transfected with these vectors are claimed, as well as a method for production of RetL3, its soluble variants and fusion proteins with a toxin, imageable compound or radionuclide. RetL3, optionally when expressed from vectors in vivo, is used to	and/or autophosphorylation of the Ret tyrosine kinase domain. Vectors containing retL3 DNA and prokaryotic or eukaryotic host	a key component of the Ret signalling pathway that specifically interacts with Ret receptor protein, triggering Ret dimerisation	sequences (see W37457-60 and W37462-63) are also claimed. RetL is	deduced from cons crones (see v00249) isolated from an EST database and by 5'RACE. CC This amino acid sequence comprises human Ret ligand (RetL) RetL3. CC deduced from cDNA clones (see v00251) isolated from a adult heart CC and spinal cord libraries. Rat and human RetL1, human RetL2 and CC mouse RetL3 sequences (see w37457-62) are also claimed. Human CC RetL3 is 34.3% identical to human RetL1, 34.9% identical to human CC RetL3 is 34.3% identical to human RetL1, 34.9% identical to human CC component of the Ret signalling pathway that specifically CC component of the Ret signalling pathway that specifically CC interacts with Ret receptor protein, triggering Ret dimerisation CC vectors containing retL3 DNA and prokaryotic or eukaryotic host collist transformed or transferted with these vectors are claimed, as CC well as a method for production of RetL3. Its soluble variants and CC fusion proteins with a toxin, imageable compound or radionuclide. CC retL3, optionally when expressed from vectors in vivo, is used to CC promote growth of new tissue and survival of damaged tissue, particularly kidney or neural tissue, Typical applications are in CC renal failure, nephritis, kidney transplants, toxic or hypoxic conjury, neurodegeneration, motor neurone disease, multiple sclerosis, CC bacterial, viral or prion infections (e.g. meningitis, myelopathy CC associated with HIV or Creutzfeldt-Jakob disease), cranial nerve or Spinal cord injury, developmental disorders such as Down's syndrome CC spinal palsy, or conditions involving the peripheral nervous CC system (Lyme disease, muscular dystrophy and myasthenla gravis). CC cells, especially tumours.

This polypeptide comprises a partial sequence of mouse Ret ligand RetL3, deduced from EST AA050083 cDNA (see V00256). A full-length mouse RetL3 sequence (see W37461) was also obtained. Rat, mouse and human retL1, retL2 and retL3 cDNA sequences (see V00245-51) and encoded polypeptides (see W37457-63) are claimed and can be used in methods for promoting cell growth and improving survival of cells, especially renal or neural cells.

                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC partial polypeptide sequence (see w37463) is also claimed, as well covol250) isolated from a human adult heart cDNA library: a full-length RetL3 sequence (see w37463) is also claimed, as well cas rat and human RetL1, human RetL2 and mouse RetL3 sequences (see w37455-61). Ret ligand is a key component of the Ret signalling pathway that specifically interacts with Ret receptor CC protein, triggering Ret dimerisation and/or autophosphorylation of the Ret tyrosine kinase domain. Vectors containing retL3 DNA and prokaryotic or eukaryotic host cells transformed or transfected CC with these vectors are claimed, as well as a method for production of RetL3, its soluble variants and fusion proteins with a toxin, CC imageable compound or radionuclide. RetL3, optionally when expressed from vectors in vivo, is used to promote growth of new CC tissue and survival of damaged tissue, particularly kidney or neural tissue. Typical applications are in renal failure, neural failure, on the compound of proteins with a toxic conspiration, whotor neurone disease, multiple sclerosis, can decertal, viral or prion infections (e.g. meningitis, myelopathy CC associated with HIV or creutzfeldt-Jakob disease), cranial nerve or spinal cord injury, developmental disorders such as Down's syndrome cand cerebral palsy, or conditions involving the peripheral nervous system (Lyme disease, muscular dystrophy and myasthenia gravis). CC Fusion proteins are used to deliver toxins etc. to Ret-expressing cc cells, especially tumours.

CC Italim 2; Page 69-70; 113pp; English.

CC This amino acid sequence comprises human Ret ligand (RetL) RetL2,

CC deduced from a cDNA clone (see V00248) isolated from a human foetal

CC liver library. Rat and human RetL1 and human and mouse RetL3

CC sequences (see W37457-59 and ward and mouse RetL1 is a

RetL2 is 49-18 identical to human RetL1 protein. RetL is a

RetL2 is 49-18 identical to human RetL1 protein. RetL is a

RetL2 is 49-18 identical to human RetL1 protein. RetL is a

RetL2 is 49-18 identical to human RetL1 protein. RetL is a

RetL2 is 49-18 identical to human RetL1 protein. RetL is a

RetL2 is 49-18 identical to receptor protein, triggering Ret dimerisation

CC key component of the Ret synalling pathway that specifically

CC uniteracts with Ret receptor protein, triggering Ret dimerisation

CC vectors containing retL2 DNA and prokaryotic or eukaryotic host

CC vectors containing retL2 DNA and prokaryotic or eukaryotic host

CC vectors containing retL2 DNA and prokaryotic or eukaryotic host

CC vectors containing retL2 DNA and prokaryotic or eukaryotic host

CC vectors containing retL2 DNA and prokaryotic or eukaryotic host

CC vectors containing retL3 DNA and prokaryotic or eukaryotic host

CC vectors containing retL3 DNA and prokaryotic or readionuclide.

CC vectors porteins with a toxin, imageable compound or radionuclide.

CC vectors porteins are unit its use. Typical applications are in

CC promote growth of new tissue and survival of damaged tissue,

PS Claim 2; Page 64-66; 113pp; English.

CC This amino acid sequence comprises human Ret ligand (RetL) RetL1, CC deduced from cDNA clones (see W00247) isolated from a human CC foetal kidney. Rat RetL1 and mouse and human RetL2 and RetL3 CC sequences (see W37457 and W37460-63) are also claimed. The cc ligand CC interacts with Ret receptor, triggering Ret dimerisation and/or CC interacts with Ret receptor, triggering Ret dimerisation and/or CC containing retL1 DNA and prokaryotic or eukaryotic host cells containing retL1 DNA and prokaryotic or eukaryotic host cells cromptoned or transferted with these vectors are claimed, as well CC contains with a toxin, imageable compound or radionuclide. RetL1, CC optionally when expressed from vectors in vivo, is used to promote CC growth of new tissue and survival of damaged tissue, particularly CC kidney or neural tissue. Typical applications are in renal failure, CC neurodegeneration, motor neurone disease, multiple sclerosis, bacterial, viral or prion infections (e.g. meningitis, myelopathy CC associated with HIV or Creutzfeldt-Jakob disease), cranial nerve or spinal cord injury, developmental disorders such as Down's syndrome CC system (Lyme disease, muscular dystrophy and myasthenia gravis). Title:

Description: Perfect Score: Sequence: >US-08-866-354-42 (1-397) from US08866354.pep 2962 1 MGLSRSPRPPPLVILLLVLS.....LRLPVLSFFILTLILLQTLW 397

Scoring table: PAM 150 Gap 11

Searched: 116738 segs, 37463448 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

pir58 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 46.083; Variance 83.617; scale 0.551

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

isolated glial cell derived neurotrophic factor receptor alphia useful to develop products to diagnose and treat associated disorders, particularly enteric nervous system or kidney disorders Claim 1; Page 78-79; 100pp; English.

This protein comprises full-length rat glial cell derived neurotrophic factor receptor alpha (GDNFR alpha), a novel GPI-linked protein that is a ligand-binding component of the receptor system for GDNF. Its amino acid sequence was deduced from an isolated cDNA clone (see T84975). The invention relates to novel uses of GDNF and its receptor. In particular, it 13-MAR-1997; U04363.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     relates to native rat GDNFR alpha (see W27327), its variants and soluble derivatives (extracellular domain), chimeric GDNFR alpha and antibodies which bind to the GDNFR alpha, including agonist and neutralising antibodies, as well as various uses for these molecules. It also relates to assay systems for detecting ligands to GDNFR alpha, systems for studying the physiological role of GDNF, diagnostic techniques for identifying GDNF related conditions methods for identifying molecules homologous to GDNFR alpha, and therapeutic techniques (claimed) for the treatment of GDNF related and GDNFR alpha related conditions, particularly kidney disease associated with glomerulonephritis and enteric nervous system related disorders. Transgenic and knockout animals are also

The amino acid sequence was deduced from a cDNA clone (see V00245) obtained CC from a rat embryonic kidney cDNA expression library. Human RetL1 CC as well as mouse and human RetL2 and RetL3 sequences have also been CC identified (see W37458-63). Vectors containing retL1 DNA and CC identified (see W37458-63). Vectors containing retL1 DNA and CC with these vectors are claimed, as well as a method for production CC proteins with a toxin, imageable compound or radionuclide. RetL1, optionally when expressed from vectors in vivo, is used to promote CC growth of new tissue and survival of damaged tissue, particularly CC kidney or neural tissue. Typical applications are in renal failure, neurodegeneration, motor neurone disease, multiple sclerosis, compounties, kadney transplants, toxic or hypoxic injury. CC sasociated with HIV or Creutzfeldt-Jakob disease), cranial nerve or spinal cord injury, developmental disorders such as Down's syndrome and cerebral palsy, or conditions involving the peripheral nerveus cystem (Lyme disease, muscular dystrophy and myasthenia gravis). CC Fusion proteins are used to deliver toxins etc. to Ret-expressing CC cells, especially tumours.

Treat dopaminergic nerve cell disorders, e.g. Parkinson's and Treat dopaminergic nerve cell disorders, e.g. Parkinson's and Treat dopaminergic nerve cell disorders, e.g. Parkinson's and Alzheimer's Claim 1; Pages 91-93; 196pp; English.

The present sequence is the human glial cell line-derived neurotrophic factor (GDNF) receptor, which can be used to treat Copaminergic nerve cell disorders, e.g. Parkinson's and Alzheimer's Colsease or amyotrophic lateral sclerosis, complications of diabetes and Huntington's disease and (optionally in combination with GDNF) Colsease or amyotrophic lateral sclerosis, combination with GDNF) Colsease or amyotrophic lateral sclerosis, combination with GDNF) Colsease and the receptor can also be used to block Colsease are sensory neurons. The receptor can also be used to block Conwanted GDNF activity, analyse GDNF related molecules and Stabilise GDNF in pharmaceutical formulations. Receptor expressing cells, preferably transfected ex vivo, can be used similarly by is implantation, and the use of the receptor CDNA in gene therapy is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       88888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC also contemplated. Probes based on the cDNA can be used to identify CC GDNF responsive cells and tissues, e.g. to identify patients who CC would benefit from GDNF therapy, and abnormalities in receptor CC expression, and to isolate molecules that form a complex with the CDNA or are homologous/cross reactive with the CDNA and animal C models that overexpress the receptor can be used to study the C biological function of GDNF, knockout transgenic animals can be used to detect GDNF dependent neurons or processes and the antibody C can be used in immunoassays for the receptor. The receptor binds C GDNF specifically and with high affinity, acting as part of a C complex that mediates/enhances signal transduction by GDNF, i.e. C increasing dopamine uptake in dopaminergic cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Tabular output not generated. Mon Mar 8 14:52:02 1999; MasPar time 24.44 Seconds 763.226 Million cell updates/sec

Run on:

Title:

Description: Perfect Score: Sequence: >US-08-866-354-43 (1-498) from USO8866354.pep 2337 1 MYXXLXXXPXPPXXXMXLXL.....XLPVLMLTALAXLLSXXXXS 498

Scoring table: PAM 150 Gap 11

Searched: 116738 segs, 37463448 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

pir58 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 43.709; Variance 79.332; scale 0.551

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This protein plays a role in the regulation of cell growth by
interacting with DAN protein through DA41 protein.
